

PROFESSIONAL SUMMARY

Eleven years designing digital products used by millions across countries: enterprise AI, complex B2B platforms where administrators configure what employees experience, and a digital wellbeing app with 1M+ downloads. I design end-to-end, from research and strategy to shipped component libraries, design systems, and production-ready interfaces, holding visual craft to the same standard as the flows underneath it. Claude, Cursor, Figma Make and v0 let me explore many directions at once; Eleven years of craft decides which one ships.

EXPERIENCE

Lead Product Designer · TaskUs

APR 2021 – JUL 2026

PRODUCTS: HIRING, TRAINING, TICKETING, COMPLEX BPO QA FLOWS AND DASHBOARDS | RESEARCH, INTERVIEW, DEMO, DESIGN, HANDOVER

- TaskGPT, AI suite for customer service teams. Content generation and regeneration, writing assistance, fake detection, and a set of extensions on top. Designed for two audiences at the same time, the operator using AI inside a live customer call and the administrator setting quality standards behind them, working across OpenAI, PaLM 2 and LLaMA. Moving it behind an encrypted wall and into the flow of the call solved the privacy problem and improved performance and speed by 20% in one go.
- EvaluateUs, transforming complex hiring and training scoring, review and reporting workflows. Designed the whole thing: scoring criteria, review queues, results tables, and the reporting that came off them, built around how a reviewer actually moves through a case rather than how the rubric happens to be written down. Accuracy and speed improved by 17%
- LevelUp, gamification. A two-sided system. Managers set the KPIs and the rewards attached to them; agents meet the same system as 3D avatars and live leaderboards, built in Three.js. It was the first gamification work at TaskUs and became the standard other teams built on. Improved engagement by 40%
- Design system. I owned it from token architecture through to the shipped component libraries, keeping mobile and web consistent across 14 countries with accessibility built in rather than bolted on afterwards. As the only designer, the system was also the only way to scale myself.
- AI in the workflow. Claude, Cursor, Figma Make and v0 to build several UX directions in parallel, which surfaced edge cases and let me test a mental model before a stakeholder review instead of after one. Time-to-concept down 60%.

Product Designer · Mindefy Technologies

MAR 2017 – FEB 2021

FINTECH, PAYMENTS AND DIGITAL-WELLNESS STUDIO

- YourHour, digital wellbeing. A digital detox app with more than a million downloads, over 70,000 reviews at 4.6 stars, and 22 languages. The design question was tone. Most screen-time apps shame you, and shame makes people delete the app rather than change the habit, so the intervention had to stay gentle enough to be worth keeping. That came out of more than 300 research sessions.
- EarlyFoods, e-commerce. A premium organic food brand for babies and young children. More than 400 interviews with parents showed the barrier was trust rather than price, so I rebuilt the buying experience around sourcing and provenance instead of discounting.
- Redesigned JEGO, a video streaming, wellbeing and mentorship platform with an RTL-first approach shaped around Gulf cultural contexts. Usability satisfaction increased by 25%.
- GreenBill, digital invoicing. A paperless receipt and invoicing system for supermarkets: OCR turns a paper receipt into a digital one, cutting operating cost and paper waste at the point of sale.

Product Design Consultant & Founder · The Artist Banda

MAR 2015 – FEB 2017

FINTECH, PAYMENTS AND DIGITAL-WELLNESS STUDIO

- I entered an open MyGov competition to design a mark for the Aatmnirbhar Bharat campaign: the Indian tricolour and Ashok Chakra fused with a golden bird, a reference to the country once being called sone ki chidiya. The competition was never formally decided. The mark was taken up by the PM SVANidhi scheme and used by manufacturers marking Indian-made goods, without credit.
- Designed an end-to-end payment and energy mobility ecosystem across mobile app, web portal and field-operations dashboard for Repos Energy. The work connected real-time transactions with the practical needs of people working on the ground.
- ZuQA, API testing tool. Postman had no low-code API testing at the time; a friend was building the concept and I joined as design hand. Progressive disclosure cut cognitive load and developer onboarding time by 15%.
- Job App Assistant: A live AI web app designed, coded and deployed solo in one session (Node.js + Claude API): job-app-assistant.onrender.com

SKILLS & EXPERTISE

UX Research, Stakeholder Interviews and demos, Wire-framing, Branding, Product roadmapping, Design Systems, Behavioural design, Gamification, Accessibility (WCAG 2.1 AA), Claude, Cursor, Figma Make, v0, Framer, Lovable, Bolt, Generative AI tools, 1,000+ user-research sessions across products, Usability and A/B testing, Journey mapping, Ethnographic studies, Figma, Adobe Creative Suite, Framer, Webflow, HTML/CSS, Micro Animation, Cross-functional collaboration, Agile and sprint planning, Mentorship

EDUCATION

UX, UI and Interaction Design · Interaction Design Foundation	2015 – 2017
Design, Animation and VFX · Maya Academy of Advanced Cinematic (MAAC)	2012 – 2014
Bachelor of Commerce with Computer Science · Devi Ahilya Vishwavidhyalay	2012 – 2014
