PROFILE

Senior product designer with **11 years** of experience in consumer apps, fintech and enterprise AI. Often as the only designer, I take products from the first research session to developer handover. I designed **a consumer app with over a million downloads** and **AI tools for around 35,000 daily users in 14 countries**. I also designed **a credit platform that lenders and borrowers both trust**. I start with the decision a person must make, explore more than one direction, and give a clear reason for each choice. I use AI every day to find research, hunt edge cases and prototype in code.

EXPERIENCE

Lead Product Designer · TaskUs

APR 2021 – JUL 2026

REMOTE · FOUNDING AND ONLY DESIGNER, DIGITAL IT · MULTI-TENANT PRODUCTS SOLD TO CLIENTS ON SUBSCRIPTION · AROUND 35,000 DAILY USERS IN 14 COUNTRIES

- **EvaluateUs (AI-scored assessments):** An AI scored hiring, coaching and training assessments. Three people read each result. The candidate asks: how did I do? The assessor asks: can I trust this score? The manager asks: does it help my team? The first prototypes showed that reporting was the real value. I designed each view for that person's next decision. **Accuracy increased by 17%.**
- **TaskGPT (AI for agents on live calls):** Most of it ran as a Chrome extension inside the agents' own tool, so nobody switched windows mid-call. A multi-tenant admin gave each client campaign its own tools, AI model and knowledge base. I kept AI-suggested labels only when they matched the business's own words. I designed how we measured it: usage, answer quality, guardrails, token cost and agent feedback. **Call-handling time and operational costs each decreased by 20%.**
- **LevelUp (gamification):** Managers set targets, challenges and rewards. Agents compete as their own 3D characters (18 fully rigged, built in Three.js) on live leaderboards. Everyone who takes part wins something. It became the company standard and was showcased at AWS Summit London 2025.
- **AutoQA (automated call review, my last product):** The first build showed insight but helped nobody act. I held it to its goal: get the agents with the most flagged calls into training and one-to-ones. I wrote a UX review and, with the SVP, director and dev manager, split the fixes into small steps to keep a three-month timeline. AI found the edge cases; my review started where the AI stopped.
- **Design system and accessibility:** I extended the global foundation to WCAG 2.2 AA across around 20 live products. I added a component layer for the TaskGPT admin and a theme so TaskUs could sell EvaluateUs to external clients. As the only designer, it was the only way to scale myself.
- **AI-native workflow:** I used Claude (connected to Figma), Claude Code, Cursor, Figma Make, v0 and Lovable every day. With them, I explored several directions at the same time and prototyped in code. **Time to concept decreased by 60%.**

Product Designer · Mindefy Technologies

MAR 2017 – FEB 2021

INDORE, INDIA (FORMERLY MIND-E-FY SOLUTIONS) · PRODUCT STUDIO: FINTECH, PAYMENTS, WELLBEING AND CLIENT PRODUCTS · INTERN TO SOLE PRODUCT DESIGNER

- **YourHour (digital wellbeing app):** It helps people control their phone use through awareness and small wins, not shame. I was the sole designer from start to finish: research, prototypes, visual design, brand, design system and handover. I also designed and animated the milestone badges and a mascot made from the logo. I'd rather earn a habit than engineer a compulsion. **Over a million downloads, 70,000+ reviews, 22 languages, 300+ research sessions.**
- **GreenBill (fintech: paperless bills):** Supermarkets print long paper bills. GreenBill sends each bill to the shopper's phone, and OCR turns paper bills into digital ones. I designed four apps on one system: shoppers keep bills and set a budget, merchants bill on web or mobile, and owners see all branch sales on one dashboard. My usability toolkit found **85% of issues before development**.

- **JEGO (client project, UAE):** A wellbeing and mentorship video platform for Gulf audiences. I redesigned it right-to-left first, for Arabic readers. Mentor profiles come first, so people can trust the person behind each course. **Usability satisfaction increased by 25%.**
- **Hiring and mentoring:** I hired and mentored junior and mid-level designers.

Product Design Consultant & Founder · The Artist Banda

2014 – 2017

BENGALURU, INDIA · INDEPENDENT CONSULTANCY · FINTECH, E-COMMERCE AND DEVELOPER TOOLS · EARLIER CO-RAN A PRODUCTION HOUSE WITH 200+ CLIENTS IN UNDER THREE YEARS

- **EarlyFoods (e-commerce):** Food for expecting mothers and young children. Only a few products sold from a strong range, and the client thought price was the problem. My heuristic review found many broken elements, and a survey with nearly 400 replies showed that parents needed trust first. We built a new store, not a patch: sourcing and certification come first, and products are easy to filter, combine and order. **Sales increased by 33% within two months**, and a follow-up survey confirmed why.
- **Repos Pay (fintech: credit for fuel delivery):** Repos Energy supplies fuel to businesses with long payment cycles, so many need credit. Repos Pay let fuel pump owners give that credit with less risk. A business passed a digital identity check (KYC), signed the agreement in the app and bought fuel on credit, and Repos guaranteed the payment. I designed the apps for both sides, the admin portal and the Repos Pay brand.
- **ZuQA (API testing tool):** I used progressive disclosure, so developers saw advanced options only when they needed them. **Developer onboarding time decreased by 15%.**

SKILLS & EXPERTISE

DISCOVERY & RESEARCH	Problem framing with PM and engineering · interviews · surveys and heatmaps · heuristic reviews · usability testing · synthesis into clear themes
DATA & OUTCOMES	Funnel and analytics review · product instrumentation (DAU/MAU, engagement, AI quality, cost) · success metrics · conversion
INTERACTION & CRAFT	Mobile and web apps · flows, wireframes and prototypes · edge cases and error states · behavioural design and gamification · motion (Lottie) · UX writing · right-to-left and multilingual
SYSTEMS & ACCESSIBILITY	Design systems from tokens to shipped components · WCAG 2.2 AA · brand identity and guidelines · Figma libraries · developer handover specs
AI, TOOLS & CODE	Figma · Claude and Claude Code · Cursor · Figma Make · v0 · Lovable · Git, GitHub and Vercel · HTML/CSS · Three.js
COLLABORATION	Hiring and mentoring designers · feedback in both directions · working through constraints with engineers · stakeholder reviews

NOTABLE WORK

- **Job App Assistant:** A live AI web app that I designed, coded and deployed alone in one session (Node.js and the Claude API): job-app-assistant.onrender.com.
- **Aatmnirbhar Bharat mark:** My entry to an open MyGov competition. The PM SVANidhi micro-credit scheme later took up the mark, and manufacturers use it to mark Indian-made goods.

EDUCATION

Interaction Design Foundation · UX, UI and Interaction Design — 2015 – 2017

Maya Academy of Advanced Cinematics (MAAC) · AD3D Edge+ Diploma: Design, Animation and VFX — 2012 – 2014

Bachelor of Commerce with Computer Science · B.Com and CS — 2011 – 2014
